

## **S&P India Shariah Liquid 35/20 Capped Index (Custom)**

**Index Objective.** The index measures the performance of 30 of the most liquid constituents of the Underlying index listed in India that have had no more than 10 non-trading days over the previous quarter and a six-month average daily value traded (6M ADVT) of at least US\$250,000. The index is capped market capitalization weighted, with constituents' float-adjusted market capitalization (FMC) weights subject to the 33/19 capping scheme defined below.

**Underlying Index.** S&P India BMI Shariah Index. For information on the underlying index, please refer to the S&P Shariah Methodology and the S&P Global BMI, S&P/IFCI Methodology at [www.spglobal.com/spdji](http://www.spglobal.com/spdji).

**Index Eligibility.** At each rebalancing, constituents of the underlying index that satisfy the following are eligible for index inclusion:

- Be locally listed on the Bombay Stock Exchange
- Have no more than 10 non-trading days over the previous quarter.
- Have a six-month average daily value traded (6M ADVT) of at least US \$250,000.

**Index Construction.** At each rebalancing, rank the eligible stocks in the underlying index by 6M ADVT, selecting the top 30 for index inclusion, subject to the following selection buffer:

1. All stocks ranked in the top 24 are automatically selected.
2. Current constituents ranked in the top 36 are selected until the target constituent count is reached.
3. If after step 2 the target constituent count is still not met, the largest non-constituent is selected and added to the index. This process continues iteratively until the target constituent count of 30 is met.

**Index Additions.** Except for eligible spin-offs and the replacement rule below, no additions are made between rebalancing.

**Spin-offs.** Spin-offs are added at a zero price at the market close of the day before the ex-date (with no divisor adjustment) and are removed after at least one day of regular way trading (with a divisor adjustment), regardless of Shariah compliance. Where applicable, all deletions from the parent index are deleted from the Shariah-compliant index on the same day.

**Index Deletions.** Except for constituents removed from the underlying index by the Monthly Shariah Review (see the underlying index methodology), constituents removed from the underlying index are removed from the index simultaneously. If a constituent is deleted between rebalancing, the next largest stock, by 6M ADVT as of the prior quarterly rebalancing, is added as a replacement in order to maintain a constituent count of 30. Constituents added under the replacement rule are added at the stock's FMC weight. Monthly Shariah Review Removal. Constituents removed from the underlying index as part of the monthly Shariah review are retained in the index until the subsequent rebalancing.

**Constituent Weighting.** At each rebalancing, the index is capped market capitalization weighted, with constituents' FMC weights capped by the following constraints, if necessary:

- If the largest constituent's weight exceeds 33%, that constituent is capped at 33%.

- If the weight of any other constituent is greater than 19%, that constituent is capped at 19%.

Any excess weight due to capping is proportionally redistributed to uncapped constituents. The process continues iteratively until both constraints are satisfied.

**Index Maintenance.** All index adjustments and corporate action treatments follow the underlying index.

**Rebalancing.** The index rebalances quarterly, effective prior to the opening of the Monday following the third Friday of March, June, September, and December. The rebalancing reference date is the close of the last business day of the previous month. The reference date for prices used for the weighting process is the close of the Wednesday prior to the second Friday of the rebalancing month.

**Currency of Calculation.** The index calculates in U.S. dollars, Indian rupees, and Emirati dirhams.

**Exchange Rate.** Refinitiv FOREX spot rates, RIC ticker "AED=" and "INR=", are taken daily at 9:00 AM GMT and used in the calculation of the index
